BATCH-PROCESS AUTOMATION 172

Partial List of Suppliers: Batch-Control Software and Systems 172
Batch-Control and Management Software 172
Batch-Control Standards 172
Part 1: Models and Terminology 172
Part 2: Data Structures and Guidelines for Languages 173
Part 3: General and Site Recipes 174
Part 4: Batch Production Records 175
Benefits of Standards Reach beyond Batch-Process Control 175
Glossary of Common Batch Terms 176
Other Related Standards 176
IEC 61131-3: PLC Programming Language Standard 176
IEC 61499: Function Block Standard 177
ISA 95: Control and Enterprise Integration Standard 178
B2MML: Business-to-Manufacturing Markup Language Standard 180
Models 180
Physical Model 180
Control Activity Model 180
Procedure Model 180
Process Cell 180
Physical Structure of a Plant 181
Systems for Batch Automation 181
Batch-Control Functions 183
Interlock 183
Regulatory Control 183
Discrete Control 183
Sequential Control 183
Normal and Exception Logic 184
Unit Batch and Recipe Management 185
Unit Modes 185
Unit States 185
From Analysis to Implementation 185
Methods for Analysis 186
Project-Application Specification 187
Batch-Control Applications 188
Advantages of Using General and Site Recipes 188
Computer-Aided Formulation 188
Electronic Batch Records and Signatures 189
Impact of 21 CFR Part 11 190
Product Safety and Traceability 190
Applying Model Predictive Control to Batch Processes 190
Dynamic Recipe Update to Improve Product Consistency 191
Selecting the Right Key Performance Indicators for Batch-Process Optimization 192
Optimizing the Supply Chain 192
Process-Plant Optimization 194
Enterprise-Wide Optimization 194
Control and Enterprise Synchronization 195
Internet Technology Is the Primary Enabler 196
Fault Tolerance and Reliability 197
System Selection Criteria 198
Acknowledgments 199

PLANT-WIDE CONTROLLER PERFORMANCE MONITORING 200

Partial List of Suppliers 200
Summary 200
Background 200
Definition of Control Performance 203
Control Performance Metrics 203
Control Variance as a Measure of Disturbance Response 203
Controller Oscillation as a Measure of Unnecessary Control Action 204
Control Condition and Diagnostic Metrics 206
Service Factor and Effective Service Factor 206
Output Saturation 207
Valve Travel 207
Alarm Count and Operator Intervention Count 207
Signal Nonlinearity 207
Value Stiction Metric 208
Error due to Stiction 209
Setpoint Activity 209
Model Predictive Control Performance Monitoring 210
MPC Control Performance Metrics 210
MPC Condition Metrics 211
CV Limit Activation 211
CV Steady-State Give-Up 211
CV Limit Violation 212
CV Prediction Quality 212
MV Limit Activation 213
Business Performance 213
Objective-Monitoring Hierarchy 214
Control Performance Monitoring and Condition-Based Maintenance 214
Roles and Responsibilities 216
Role of the Production-Maintenance Coordinator 217
Software Requirements for Enterprise-Wide Control Performance Monitoring 217
Measure 218
Contextualize 220
Analyze 221
Orchestrate 222
References 227

12
PLANT OPTIMIZATION 228

Partial List of Software Suppliers 228
Process Optimization 228
Rationale 228
Impacts of Plant Organization: On Tuning 229
Process Optimization Plan 229
Approach to Variability: "Variability Is Not Removed; It Is Managed" 230
Process Optimization Methods 231
Loop Tuning 231
Performance Indices 232
Controller Algorithms 237
Filters 237
Characterizers 237
Multi-Loop and Interacting Systems 240
Interacting Loops 240
Synchronized Loops 241
Cascade Loops 242
Feedforward Loops 243
Software Tools 244
Optimization Software 244
Closed-Loop Tuning versus Open-Loop Tuning 245
Auto-Tune, Pre-Tune, Self-Tune, etc. 251
Bibliography 252

13
NEURAL NETWORKS IN PROCESS AND AUTOMATION 254

Product Sources 254
Summary 254
Introduction 255
Neural Network Concepts 255
Biological Inspiration for Neural Networks 255
Fundamentals of Artificial Neural Networks and Terminology 256
Common NN Options 259
Example 261
Mistakes in Regression Modeling and Parallels in the Use of NNs 262
Comparison of NNs to Conventional Regression Modeling 262
NN Applications in Automation 263
Conclusions and Comments 263
References 263

14
FUZZY LOGIC CONTROL IN PROCESSES AND AUTOMATION 265

Product Sources 265
Summary 265
Background 265
FL Concepts 266
Membership in Linguistic Categories 266
FL Control 269
FL Examples for Automation 271

© 2012 by Béla Lipták

FLC of a Heat Exchanger 272
FLC of In-Line pH Neutralization 273
FL for Model Parameter Adjustment 273
Other Applications 273
Conclusions and Comments 273
References 274

15
INTERNET IN AUTOMATION AND PROCESS CONTROL SYSTEMS 275

Introduction 275
Evolution of Digital Process Control and Automation 276
Convergence of Internet with Process and Automation 278
Security Issues 278
Advent of IPv6 and IPSec 279
Feedback Control over the Internet 279
Monitoring and Supervisory Control over the Internet 280
Interconnection of Business and Manufacturing Systems 280
RFID Technology 280
Future 281
Security and Performance 281
Wireless Networks 281
Smart Sensor Standards 282
Adaptation of Internet Technology 282
Interoperability and Harmonization 282
References 282

16
TELEMETRY SYSTEMS: PHONE, RADIO, CELLULAR, AND SATELLITE 284

Introduction 284
Telemetry and Networks 284
Types of Telemetry 284
Modes of Communications 284
Telemetry Topologies 285
Master–Slave Polling 285
Peer-to-Peer Communications 286
Telemetry Protocols 286
Telephone Telemetry 287
Analog Leased Lines 287
Analog Leased Lines Topologies 287
Dial-Up Line 287
Dial-Up Topologies 288
Digital Phone Services 288
Digital Phone Service Topologies 288
Radio Telemetry 288
Radio Modems 289
Licensed Bands 290
Unlicensed Bands 291
Spread Spectrum 291
Radio Repeaters 293
Radio Topologies 294
Cellular Telemetry 295
Channels and Clusters 295
Multiplexing 296
Digital Cellular Data 296
Topology 297
Satellite Telemetry 297
Basic Satellite Technology 297
Satellite Orbits 298
Communication Bands 299
Satellite Networks 299
Satellite Networks Topology 299
Conclusion 299
Bibliography 299
